LUTHER HOUSE CHAPEL

Worship Prep Handbook

Four short guides. The roster comes in two halves — one for everyone, one for the PICs who edit it — so read the half that is yours and skip the other.

The roster — everyone

NO SIGN-IN If you serve on a Sunday, this half is yours.

1 Open the app

Works on any phone or computer. Nothing to install.

lhc-prep-tool.vercel.app

> TIP
> Add it to your home screen and it opens like an app. Anyone with the link can look at everything — no password needed.

2 Find your duty

Sundays go across the top. Duties go down the side.

Tap **Roster**, then read down the column for your Sunday until you find your name. Tap any picture to enlarge it.

> **ALSO**
>
> Tap the little green WhatsApp circle under a date to send that whole Sunday to a chat.

3 What the colours mean

Most cells are plain. A coloured one is telling you something.

Yellow — not confirmed yet. Still might change, and nothing has gone to anyone's calendar.

✓ **Tick** — confirmed. Treat it as final.

Aqua, with a clock — that person has two duties in the same service and the two *can* be held together, like Liturgist and Communion Assistant. Not a problem; just worth knowing.

↕ **A faint line between two aqua cells** — it joins the two duties that *same person* is doing, with an arrowhead at each end. On a long month several people double up, and the line saves you reading down the column to find the other half.

Solid red — a real clash. Someone is double-booked and it needs fixing.

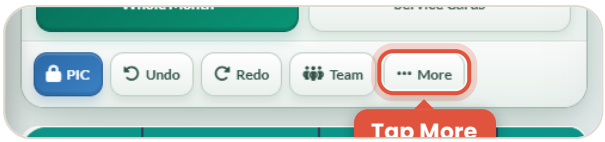

4 Put your duties in your phone calendar

Do it once. Your duties then appear by themselves, and update when the roster changes.

1. Ask your PIC for **your calendar link**. It is personal to you, and it is a different link from the availability one below.
2. Open it. The page asks for your name, then gives you a **one-tap Add to Google Calendar**, with Apple and Outlook underneath.
3. Only confirmed duties arrive. Yellow ones stay off until they are signed off.

5 Tell them when you can't serve

Two taps from the roster. No sign-in, and you don't have to tell anyone — the app takes it straight into next month's planning.

More, then **My Availability**. On a computer it is **Availability**, in the row of buttons under the roster.

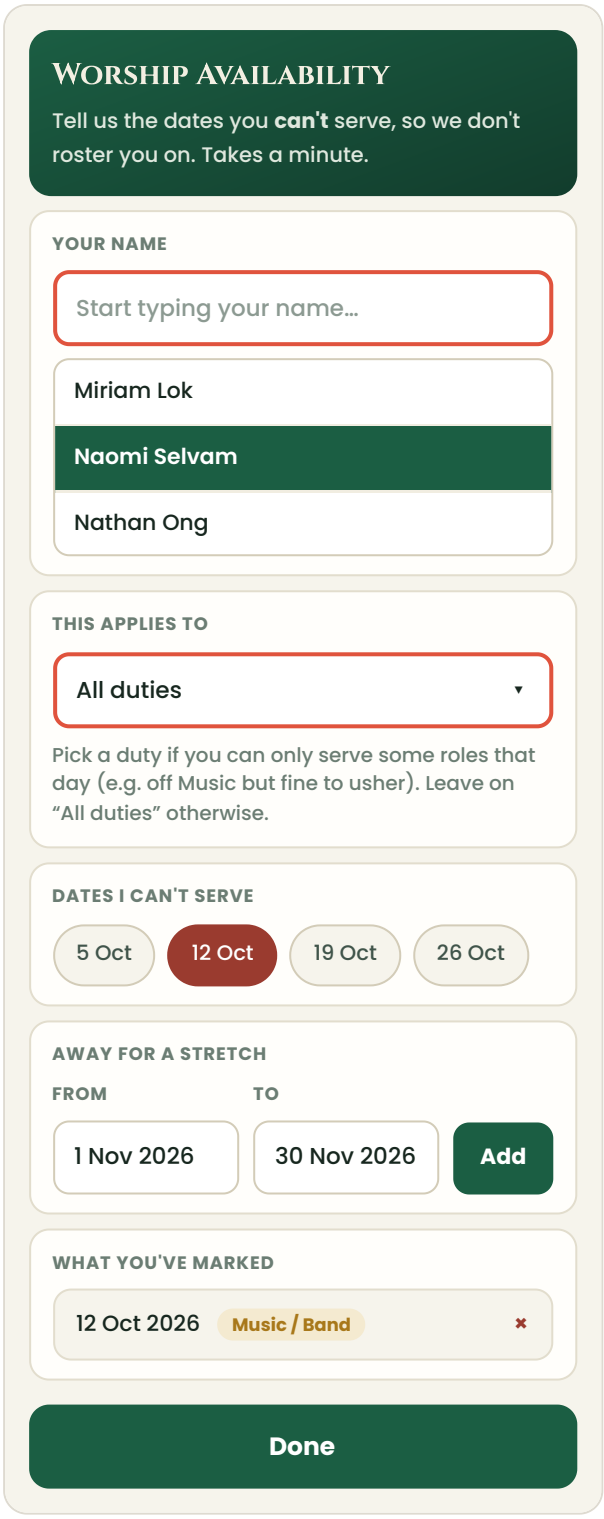

Can't make one Sunday? Tap that date under **Dates I can't serve**.

Away for weeks? Put the dates in **Away for a stretch** and tap **Add**.

1. On the Roster, tap **More**, then **My Availability**.
2. **Start typing your name** and tap it in the list. Two or three letters is enough. Nothing else appears until you have picked one.
3. Leave **This applies to** on **All duties**, or pick one group if you can still do the others.
4. **Tap the Sundays you can't serve.** They turn dark red. Tap again to un-mark.
5. Going away for a while? Put the dates in **Away for a stretch** and tap **Add**.
6. There is nothing to send. Each tap saves as you go, and **What you've marked** shows where you stand.
7. The × at the top, or **Done**, takes you back to the roster.

The same screen also has a link of its own, if your PIC sends you one.

lhc-prep-tool.vercel.app
?view=availability

DRAWING — THE REAL SCREEN SCROLLS; THE CARDS ARE IN THIS ORDER

DON'T SKIP THIS BIT

This applies to matters. If your wrist hurts, choose **Music / Band** — you will still be asked to read or usher. Only leave it on **All duties** if you really mean everything.

CHANGED YOUR MIND?

Open the same link again, choose your name, and tap the date once more — or use the × in **What you've marked.** Done is only a sign-off; it is not what saves your answers.

The roster — PICs only

SIGN IN FIRST Everything here needs the PIC sign-in. Nobody else can do it, or undo it.

1 Sign in as a PIC

Looking needs nothing. Changing the roster needs a sign-in.

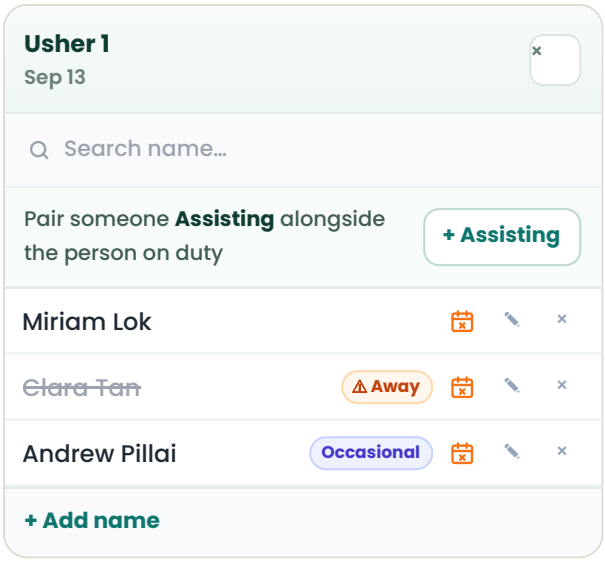

1. Tap PIC.
2. Type **your phone number**. There is no password.
3. Your name replaces the button. Tap it again to sign out.

IF IT WON'T LET YOU IN

Only numbers on the PIC list work. Ask another PIC to check the number saved for you.

2 Change who is on a duty

Tap the cell you want to change. The name list opens over the table.

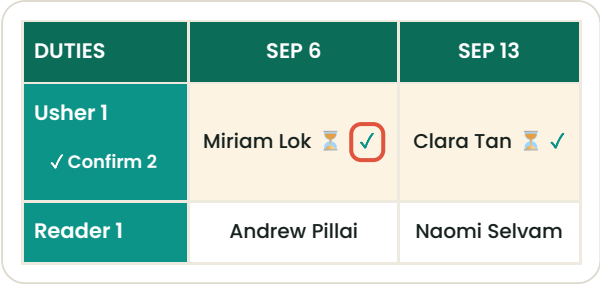

DRAWING — THE NAME LIST, OPENED ON ONE CELL

1. Search or scroll, then **tap a name**. The cell fills in and turns **yellow** — a draft until you confirm it.
2. A name that is **struck through with "Away"** has told us they can't serve that day. You can still pick them, but ask first.
3. **Occasional** means Auto-Suggest will never pick them — Pastors, mostly. Assign them by hand whenever they are able.
4. The three small buttons on each row: **calendar** for availability and rotation, **pencil** to correct a spelling everywhere at once, **×** to take them off this duty's list.
5. **+ Assisting** puts a second person alongside the first — a trainee beside an experienced LCD operator or pianist.

> **SPELLING A NAME WRONG?**
> Use the **pencil**, not delete-and-retype. The pencil fixes them everywhere; retyping leaves two half-people.

3 Confirm the roster

Yellow means nobody has been told yet. Confirming is what sends it to their calendar.

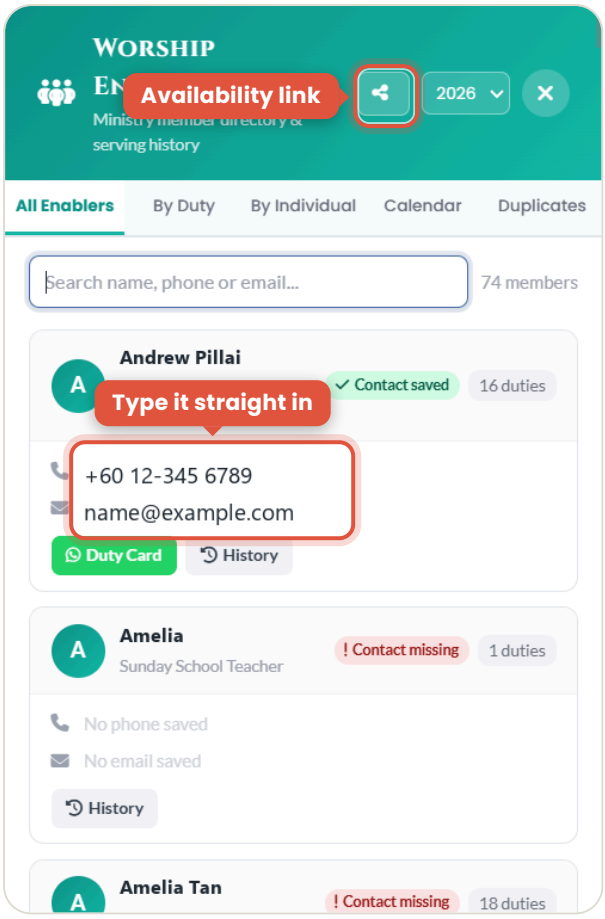

DRAWING — THE TICK SITS INSIDE EACH YELLOW CELL

1. Tap the small **tick inside the cell** to confirm just that one. Pressing **Enter** does the same.
2. Or use the **Confirm** button beside the duty name to do that whole month at once.
3. If confirming would create a clash, it says so before it does anything.

> **REMEMBER**
>
> Nothing reaches anyone's calendar until you confirm. If it is still yellow, they have not been told.

4 Keep people and contacts up to date

Open **Team** on a phone, or **Enablers** on a computer.

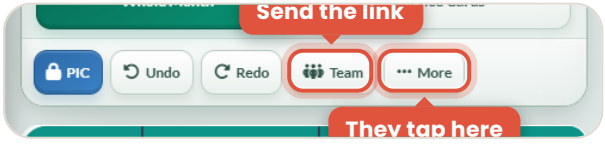

Anyone marked **Contact missing** cannot be sent a duty card or a calendar link.

1. Type a phone number or email straight in, then **Save Changes**.
2. **Duty Card** WhatsApps that person their own duties.
3. **Copy Cal Link** gives you their calendar link to send — that is the one from step 4 of the everyone half.
4. Check **Duplicates** now and then for the same person entered twice.

5 Availability: send the link, or mark someone away

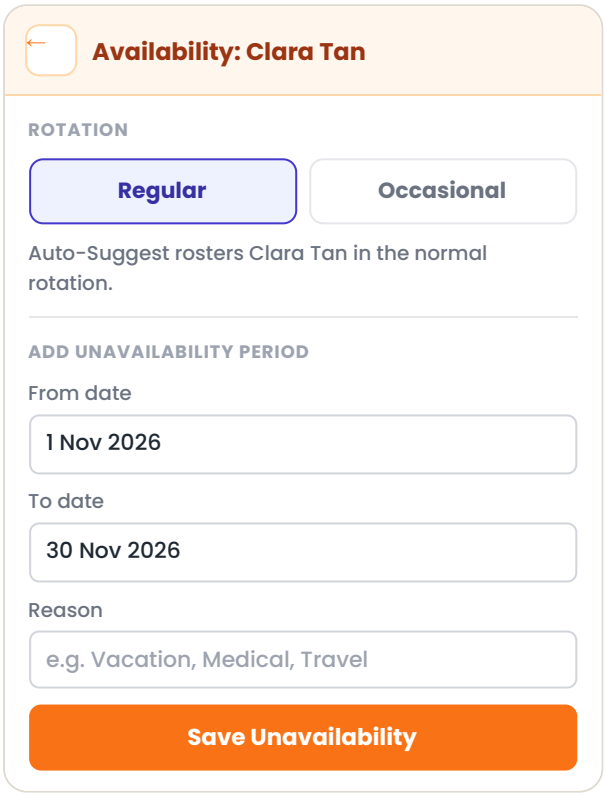

Your team can now do this themselves from **More**. This is for sending them the link anyway, and for anyone who will not go looking.

Team is where you send the link from. **More** is where everyone else marks themselves off.

1. On the roster, tap **Team** — **Enablers** on a computer. The **share icon in the green header** is **Availability link**, marked on the picture below.
2. Tapping it **copies the link and opens WhatsApp** with a message ready. Send it to the worship group.
3. It is one link for everyone, and the same one every time. Send it again whenever you are planning a new month — it is a useful nudge even for people who could reach it from **More**.

Or do it for someone who won't use the link: tap any roster cell, then the **calendar icon** beside their name.

DRAWING — OPENED FROM THE CALENDAR ICON IN THE NAME LIST

ONE DIFFERENCE WORTH KNOWING

A period you add here covers **every duty**. There is no duty picker on this panel. If someone is only off music, they need to say so on their own link — or you will take them off reading and ushering too, and nothing on screen will say why.

WHAT BEING AWAY ACTUALLY DOES

Auto-Suggest stops picking them. Their name shows struck through with an ⚠ **Away** badge in the name list, and any cell that already holds them gets flagged. It never removes anyone from a duty by itself — that stays your call.

6 Teach Auto-Suggest your rules

Auto-Suggest used to have the church's habits written into the app, so changing one meant asking for a new version. They are yours to set now, and they hold for every PIC.

Sign in as a PIC, then open **Auto-Suggest settings**. Pick a duty on the left; everything on the right applies to that duty.

Runs on this service Untick it and Auto-Suggest skips the duty on those Sundays and leaves the cell blank, instead of reporting a duty it could not fill.

Who it may pick A ticked list is a *restriction*, not a preference. If none of them are free the cell is left blank and reported, rather than filled with somebody you did not approve for that duty.

Most times a month How often it will come back to the same person for this duty. Blank uses two. It gives way when nobody fresher is free, and says so in the summary.

Doing two duties Tick every duty one person may hold *as well as* this one. Anything unticked shows red on the roster — this setting is what decides aqua against red in the colour key above.

Who goes with them "When Ruth Danker leads, the pianist should be Samuel Rajan or Esther Wong." **Should be** means it reaches for them first and falls back rather than leaving a blank; **must be** means only them, and a blank if none are free.

SINGERS WHO SING TOGETHER

Tick several names, tick **and they pair with each other**, and choose the duty — the rule is written for all of them at once, each pointing at the others. That is how "whichever of Miriam Lok, Clara Tan or Naomi Selvam is on Singer 1, one of the other two is on Singer 2" gets set in one go instead of three.

TWO THINGS WORTH KNOWING

A change here is saved for *every* PIC, not just your phone — the note under the buttons says which happened, and it will tell you plainly if it only saved locally.

A rule can only act on a duty Auto-Suggest has not already filled. Duties fill in the order they appear down the roster, so a rule pointing *back* up the list — say, from Singer 1 to Preacher — only applies if that cell was filled in by hand first. Those rules carry a note saying so.

Sunday's order

WORSHIP TEAM Building the service, and driving the screen on the day.

1 Start a service order

One Sunday's plan. It splits into two halves and you can swap between them any time.

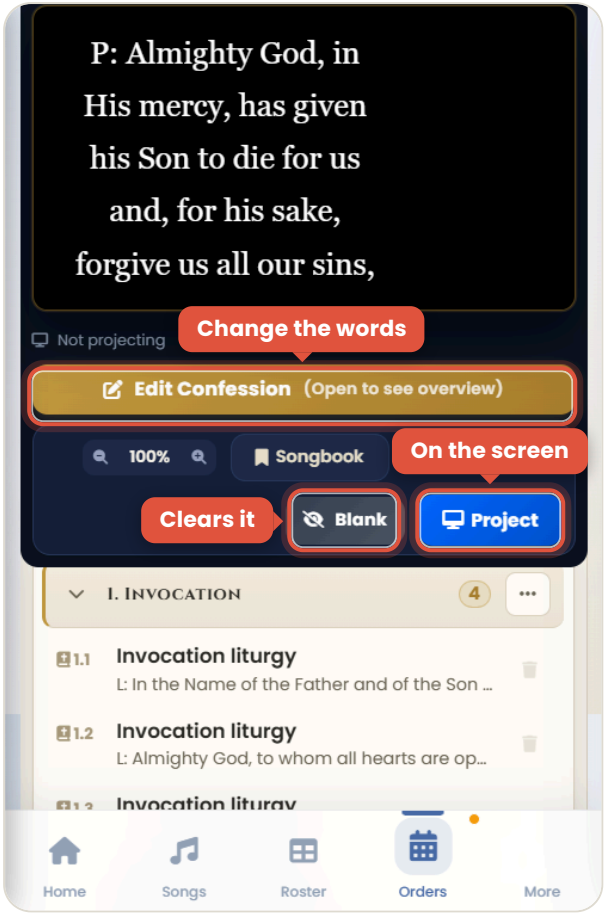

LCD Projection builds the service and drives the screen — that is next. **Song Order** is the music team's list, after it.

1. **Orders**, then **Create New Order**. To carry on with one, tap **Open**.
2. Set the date and pick Traditional, Contemporary or Special.
3. Choose a half.
4. **Save** as you go.

2 LCD Projection — run the screen

The black box at the top is exactly what the congregation will see. The service runs underneath it.

Project puts the slide on the big screen; **Blank** clears it. **Not projecting** under the slide means the congregation is still seeing nothing.

1. Click down the order and check nothing is missing.
2. Read every slide as the congregation will. Use `+ Add Slide` to split a long one.
3. `Project` puts it on the screen. `Blank` clears it between items.
4. `Backgrounds` for the preset panels, `+ Add Media` for your own.

POWERPOINT AND GOOGLE SLIDES

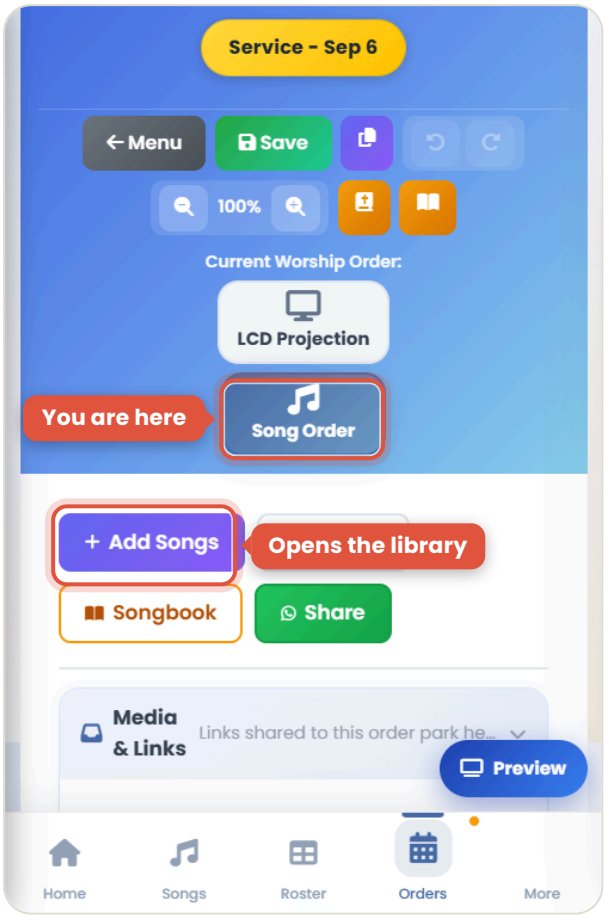

Two ways. **Upload the file** through `+ Add Media` — it takes .pptx, .pdf, .docx, pictures and video. Or **paste the Google Slides link**, which keeps the layout and the animations and lets you step through slide by slide. For anything with animations, use the link.

BEFORE THE SERVICE

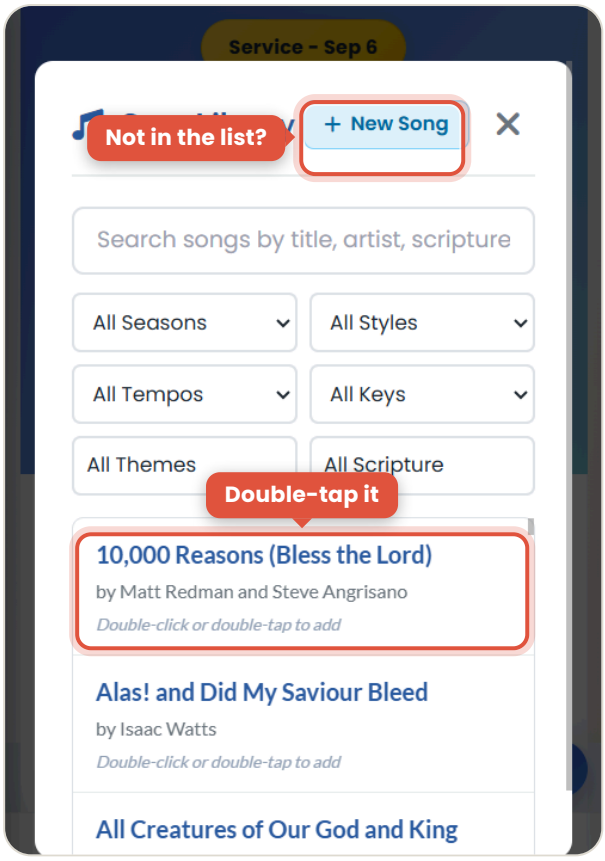

Run the whole order once in **full screen on the real projector**. It is the only way to catch a background that swallows the text or a video that will not play.

3 Song Order — put the songs in

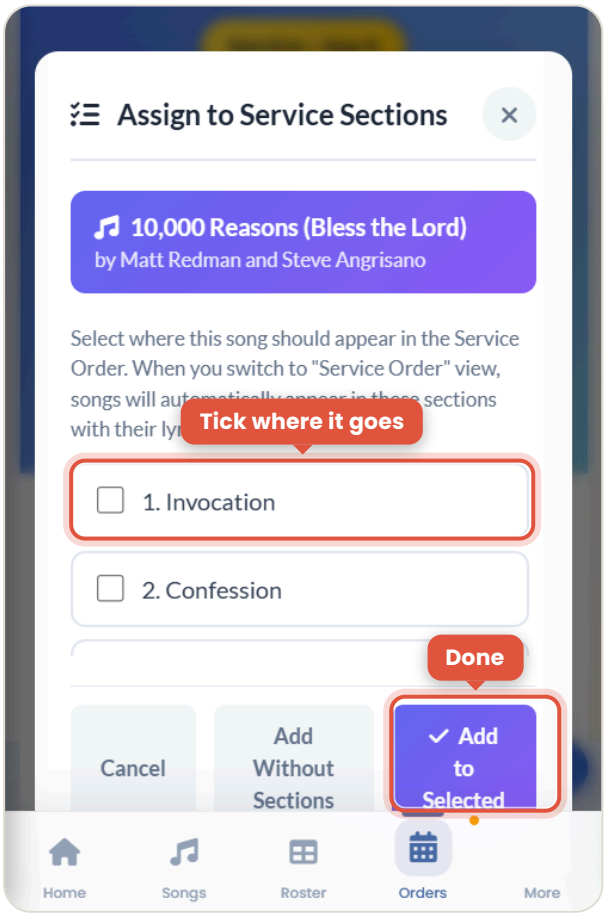

Three steps: open the library, double-tap the song, tick where it goes.

One — in **Song Order**, tap **Add Songs**.

Two — find the song and **double-tap** it.

Three — tick the part of the service it belongs to, then **Add to Selected**. The lyrics appear in the Service Order by themselves.

NOT SURE YET?

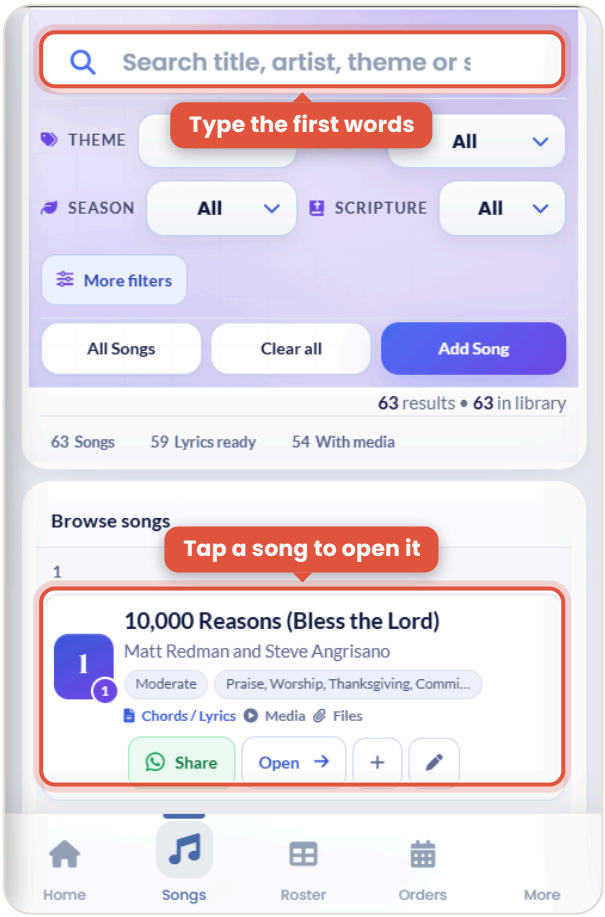

Add Without Sections drops it into the song list and you can place it later.

Songs

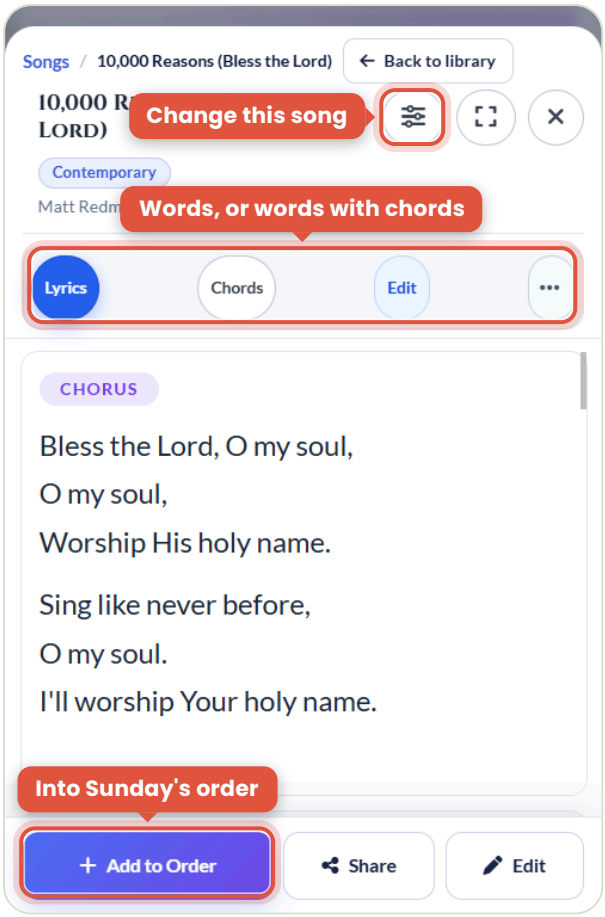

ANYONE CAN LOOK The library everything else draws from.

1 Look a song up, and check it

Everything the band and the screen use comes from here. Worth a look before Sunday.

Search matches the **start** of a title — type the first words, not a word from the middle.

1. **Lyrics** shows the words as the congregation will see them. Read them through.
2. **Chords** shows the same words with the chords above them, for the band.
3. **Add to Order** drops it straight into a service without going back to the order.
4. **Share** sends it to a chat.

> **WHAT TO CHECK**
>
> Spelling, the order of the verses, and that the last line is really the last line. A song with no lyrics saved shows nothing on Sunday — the Songs page counts those for you at the top: **59 Lyrics ready** out of 63.

2 Send a song in from YouTube

Finding a song on YouTube and posting it to the chat group is how most songs actually turn up. This puts it in the app instead, with the link already attached.

1. **On Android:** tap **Share** in YouTube, Facebook or Instagram and choose **LHC Worship Prep** from the list.

2. **On iPhone:** tap `Share` → `Copy link`, then paste it into the **Media & Links** box on the order. Apple does not let apps appear in that share list, so the copy-and-paste route is the one you have.
3. The link lands in the app's **ideas** list, where it waits until you do something with it.

From there each link offers up to three things:

Add to Order	Park it against a Sunday. Nothing is added to the library.
Add as Song	Opens the Add Song window with the title, the band and the link already filled in. You still press Save.
Transcribe	YouTube only. Watches the video and fills the words in as well. Give it a moment.

IT FILLS THE FORM; IT NEVER SAVES

Everything above stops at the Add Song window with the fields filled in, exactly like scanning a photo of a sheet. Read it before you press Save — whatever the uploader called the video is not always what the song is called, and the channel is not always the band.

WHEN WE ALREADY HAVE THAT SONG

The band gets added to the end of the name — *10,000 Reasons (Bless the Lord) — Matt Redman* — and a note tells you which song it looks like. If it *is* the same song, close the window and add the link to the one we already have instead of making a second.

WHAT TRANSCRIBE WILL AND WILL NOT CLAIM

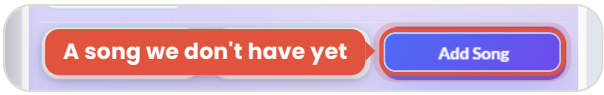

Words shown on screen are read off the screen. Words that are not are transcribed by ear, and it tells you which — by ear is worth checking line by line.

Chords are only taken when they are *printed on the screen*. It will not work them out by listening, on purpose: a chord guessed from a recording looks exactly like one that was read, and nobody holding the sheet could tell the difference. Where no chords are shown you get none, or a plain set worked out from the key and labelled as such.

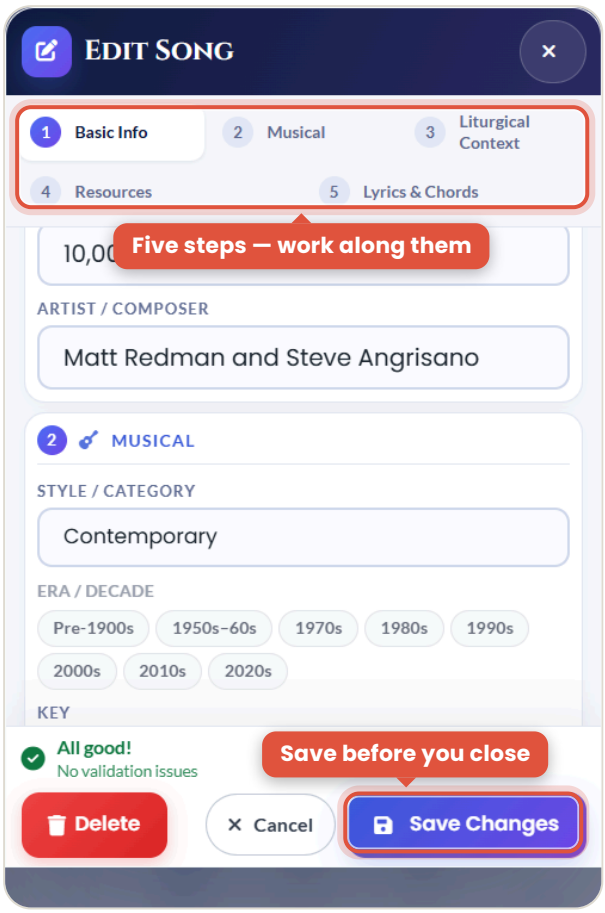

Facebook and Instagram cannot be transcribed at all — they do not let anything read them — and those links usually arrive with the title blank for you to type.

3 Add a song, or fix one

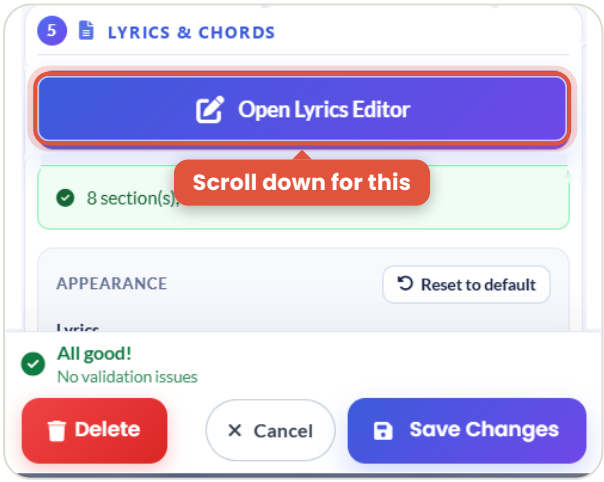

Same five steps either way. Do it properly once and it is ready for every future service.

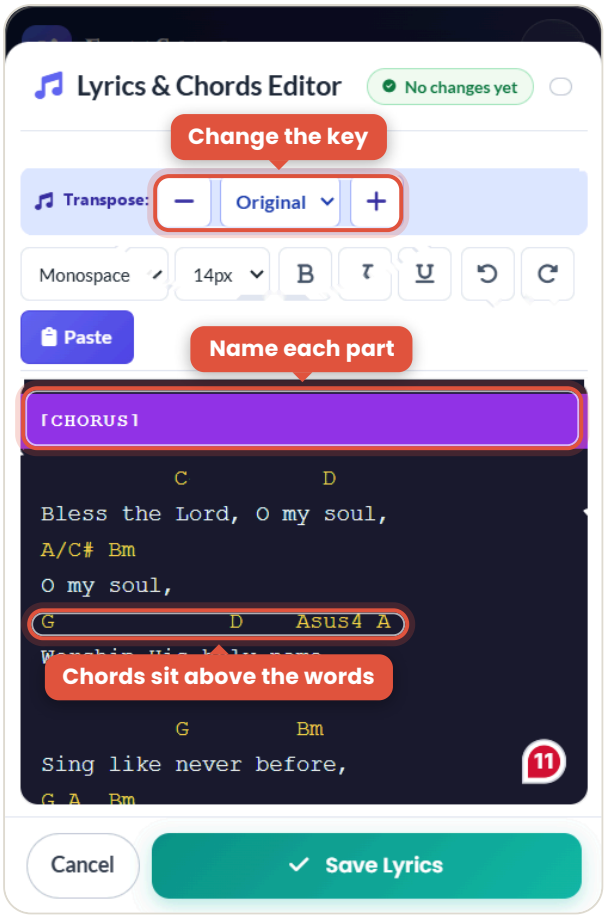

New song: **Add Song**. Changing one you already have: open it and tap the sliders icon from the step above.

Title and artist, then style and key, then season, then any files — and last, the words.

Step 5 sits at the bottom of the window. **8 section(s), 96 lines** under the button tells you something is already saved.

1. Type or **Paste** the words in.
2. Mark each part on its own line: **[Chorus]**, **[Verse 1]**, **[Bridge]**.
3. Put chords on the line *above* the words they belong to.
4. **Transpose** moves every chord at once. It does not change what is saved as the original key.
5. **Save Lyrics**, then **Save Changes** on the window behind it. Both.

> **THE BIT PEOPLE TRIP ON**
>
> **[Verse 1]** markers never appear on the screen on Sunday — they only tell the app where one slide ends and the next begins. Use them freely; a song without them becomes one enormous slide.

? If something looks wrong

Name is yellow It is a draft. A PIC taps the tick to confirm it.

Rostered anyway Marking yourself away stops Auto-Suggest, not a PIC. Tell them as well if it is already filled in.

Edit vanished	Changes save a few seconds after you stop typing. Wait for **Auto-saved** before you close the page.
Two people edited	You are shown both versions with who did which, and the newest is kept. Nothing is lost.
Song shows blank	Its lyrics were never saved. Open it, **Open Lyrics Editor**, paste them in.
